What is most important to me when closing wounds?

Superior Flexibility and Optimal Strength.

www.SurgiSeal.com
SurgiSeal™ is a topical skin adhesive that provides the optimal balance between strength and flexibility. SurgiSeal can replace sutures that are 5-0 or smaller in diameter for incision or laceration repair and is designed to save time during wound repair, provide a flexible, water-resistant, antimicrobial protective coating, and eliminate the need for suture removal.

High-Strength 2-Octyl Cyanoacrylate Formulation
SurgiSeal is made with a 2-Octyl Cyanoacrylate formulation, which features a greater breaking strength and broader uses in clinical applications than existing n-Butyl-2-cyanoacrylates.1

High Moisture Vapor Transmission Rate (MVTR)
The proprietary formulation is designed to provide optimal permeability, increasing moisture and oxygen transmission to the wound.

Antimicrobial Protective Coating
As a microbial barrier, SurgiSeal can also be used as an auxiliary adhesive in conjunction with conventional suturing for surgical incision closure, which can reduce postoperative infection rate significantly.2

OctylFlex™ Technology
Provides increased flexibility designed to contribute to patient comfort and helps preserve the integrity of the adhesive, preventing premature sloughing.

Precision Applicator
SurgiSeal's patented applicator is designed to provide greater coverage with less adhesive material and requires no catalyst to activate its adhesive properties. This self-contained applicator is designed to increase efficiency in the OR, to be used on multiple lacerations, and to reduce waste.

Adhezion is focused on producing the highest quality professional medical and consumer health products in an effort to provide the best possible patient clinical results. We will strive to provide superior service and products to professionals, patients and consumers alike, while building an innovative medical device company.

Our vision is to create an exciting and successful biomedical company that develops exciting new wound closure, wound care and surgical drape sealant products. We will endeavor to explore new materials, formulations and technologies to produce new medical products that provide superior modalities to heal and close wounds, treat disease and prevent infection.

Superior Flexibility and Optimal Strength.

Q: What is SurgiSeal?
A: SurgiSeal is a topical skin adhesive that provides the optimal balance between strength and flexibility for closing lacerations, wounds, and surgical incisions.

Q: What kinds of wounds is SurgiSeal appropriate for?
A: SurgiSeal is designed for surgical incisions and wounds with approximated edges and can effectively replace sutures, skin staples, and skin strips for topical closure of wounds. SurgiSeal is especially well suited for use on lacerations of the torso, limbs, and face, although it also can be used in conjunction with subcuticular and/or subcutaneous sutures when these are clinically indicated, as well as with punctures.

Q: Do doctors need special training to use SurgiSeal?
A: One of the most appealing features of SurgiSeal is its ease-of-use. Using Adhezon’s print or video training guide, medical professionals can learn to apply SurgiSeal correctly in just a few minutes.

Q: Does SurgiSeal require special wound preparation?
A: Wounds should be prepared employing the same techniques—including cleaning and debriding—used for wound closure with sutures or other wound closure modalities. Although applying SurgiSeal is completely pain-free for the patient, doctors may use a topical anesthetic at the wound site without affecting SurgiSeal’s efficacy.

Q: Do wounds closed with SurgiSeal scar differently?
A: 2-Octyl Cyanoacrylate offers wound healing with cosmetic results equal to sutures or other traditional wound-closure modalities.

Q: Once SurgiSeal is applied, can it be removed?
A: SurgiSeal can be safely and easily removed using gauze within approximately 10 seconds. In cases where SurgiSeal has already set, it can be loosened by applying petroleum jelly or acetone around the edges of the adhesive film.

Q: How do I order SurgiSeal?
A: To learn more about ordering SurgiSeal for your practice or hospital, please visit www.SurgiSeal.com. To speak with a customer service representative, please call 1.866.579.4938 in the USA or +1.484.334.2929 outside the USA.
